

Front End Implementation

Phase 7 – FrontEnd Implementation is done

Started the backend Terminal

Started the FrontEnd Terminal

Opening the application url in browser

Validating Module 1 — Login Page

Entering the valid password and went to homepage

clicked logout button and it came back to login page

The screenshot shows the 'AI Knowledge Platform Enterprise RAG System' login page. The left sidebar contains navigation links for Atlas Vector Search, Hybrid RRF Retrieval, and Enterprise Security. The main content area features a 'Welcome back' message and a 'Sign In' button. The login form includes fields for 'Tenant Domain' (acme.local), 'Email Address' (admin@acme.local), and 'Password' (*****). The 'Sign In' button is highlighted in blue.

Entering the wrong password and wrong email address

Validating Module 2 – Dashboard

6 KPI Cards were Present

5 Charts were present

Recent Audit Activity table were also available

Login as non-admin (employee) and check dashboard does not have data instead it should throw error

AI Knowledge Platform
Enterprise RAG System

Intelligent Knowledge at Scale

Semantic search, agentic retrieval, and LLM-powered question answering — secured with enterprise-grade multi-tenancy.

Atlas Vector Search
768-dim cosine embeddings

Hybrid RRF Retrieval
Vector + full-text with dedup

Enterprise Security
RBAC - Tenant isolation - Audit logs

© 2026 Enterprise AI Knowledge Platform

SECURE SIGN IN

Welcome back

Enter your workspace credentials to continue.

Tenant Domain
acme.local

Email Address
employee@acme.local

Password

Signing in...

Activate Windows
Go to Settings to activate Windows.

again login as admin and check dashboard data appears

Validating Module 3 – Knowledge Base

Document section has three tab – File upload , Website Crawl and Confluence

DOCUMENT

Select a document —

Configuration

Choose strategy and parameters

STRATEGY

BASIC

Fixed Size
Split by exact token count with configurable chunk size and overlap

Recursive
Hierarchical splitting — paragraph → sentence → word, until target size is met

AI

Semantic
Embedding-based grouping of semantically related sentences and paragraphs

Structure-Based
Preserves document structure — headings, sections, tables, and code blocks intact

INTELLIGENT

Query-Aware
Detects Q&A patterns in the document and groups question-answer pairs into the same chunk

Metadata-Aware
Enriches every chunk with document-level metadata: author, date, source, section header

LLM

LLM-Based
Groq LLM intelligently determines optimal chunk boundaries for your specific content

Existing Chunks

Persisted chunks for the selected document

Select a document

Choose a document above to view its stored chunks.

DOCUMENT B

Business Requirement.docx

Compare

Business Requirement.docx vs Business Requirement.docx

98%

Analysis completed in 4628 ms

AI-GENERATED SUMMARY

Summary of Key Differences:

The two documents, despite having a high similarity score of 0.98, exhibit differences primarily in the scope of technical requirements and expected deliverables. Document A focuses on the technical specifications of the project, including frontend, backend, AI, and database requirements. In contrast, Document B delves into more advanced and specific functionalities such as visualizing chunking strategies, document comparison, and agent-based retrieval workflows. These differences suggest that Document B may be an evolved or expanded version of Document A, incorporating more sophisticated features.

Topics in Document A but not in Document B:

Document A specifically mentions technical requirements like React, TypeScript, Tailwind CSS for the frontend, and FastAPI, Python for the backend, along with AI and LLM layers including LangChain, LangGraph, Sentence Transformers, and Groq Models. It also mentions MongoDB Atlas as the database and lists expected deliverables such as a complete web application and an enterprise dashboard. These technical details are not present in Document B.

Topics in Document B but not in Document A:

Document B covers advanced functionalities such as visualizing chunking strategies for learning and analysis, enabling document comparison and similarity analysis, supporting enterprise-scale retrieval and question answering, providing an agent-based retrieval workflow for complex queries, and generating summaries and insights from retrieved content. These features suggest a more complex and sophisticated application or system than what is described in Document A, focusing on advanced data analysis and retrieval

COMPLEX QUESTION

Ask a complex question requiring multi-step reasoning...

Functional testing metrics and also provide sprint weeks

completed 1 iteration 5 chunks 4866 ms

ANSWER

Functional testing metrics are included in the "Functional Testing Status Report" [1] and consist of:

- Total Test Cases
- Executed
- Passed
- Failed
- Blocked
- Pass Percentage
- Module-wise execution summary.

The sprint weeks are outlined in the "Test Approach – 4 Weeks Sprint Model" [2] as follows:

Week 1: Requirement Analysis, Test Scenario & Test Case Design

Week 2: Test Case Review & Functional Test Execution (Cycle 1)

Week 3: Defect Retesting & Functional Completion

Week 4: Regression Testing (Full Regression Suite) & Automation Execution.

COMPLEX QUESTION

Ask a complex question requiring multi-step reasoning...

Functional testing metrics and also provide sprint weeks

completed 1 iteration 5 chunks 13430 ms

ANSWER

Functional testing metrics are included in the "Functional Testing Status Report" [3] and consist of:

- Total Test Cases
- Executed
- Passed
- Failed
- Blocked
- Pass Percentage
- Module-wise execution summary

These metrics are tracked throughout the 4-week sprint model [1], with specific weeks dedicated to different testing activities:

- Week 1: Requirement Analysis, Test Scenario & Test Case Design [1]
- Week 2: Test Case Review & Functional Test Execution (Cycle 1) [1]
- Week 3: Defect Retesting & Functional Completion [1]
- Week 4: Regression Testing (Full Regression Suite) & Automation Execution [1]

COMPLEX QUESTION

Ask a complex question requiring multi-step reasoning...

Functional testing metrics and also provide sprint weeks

completed 1 iteration 5 chunks 5209 ms

ANSWER

Functional testing metrics include:

- Total Test Cases
- Executed
- Passed
- Failed
- Blocked
- Pass Percentage
- Module-wise execution summary [2].

These metrics are tracked and reported during the sprint, which is divided into 4 weeks:

- Week 1: Requirement Analysis, Test Scenario & Test Case Design
- Week 2: Test Case Review & Functional Test Execution (Cycle 1)
- Week 3: Defect Retesting & Functional Completion
- Week 4: Regression Testing (Full Regression Suite) & Automation Execution [1].

DOCUMENT B
Healthcare_Insurance_Claims_Test_Strategy.docx

Overall Similarity
23%

Analysis completed in 10329 ms

AI-GENERATED SUMMARY

****Summary of Key Differences**:** The two documents are quite different, with a similarity score of 0.23. Document A appears to focus on creating a resume search application, discussing technical aspects such as MongoDB account creation and ingestion pipelines. In contrast, Document B seems to be related to testing strategies for healthcare insurance claims, covering topics like data issues, environment instability, and roles and responsibilities. The tone and content of the two documents are distinct, indicating they serve different purposes.

****Topics in Document A but not in Document B**:** Document A contains topics related to the technical development of a resume search application, such as MongoDB account creation, ingestion pipelines, retrieval pipelines, and frontend documents. These technical aspects are not mentioned in Document B.

****Topics in Document B but not in Document A**:** Document B covers topics related to testing strategies for healthcare insurance claims, including data issues, environment instability, roles and responsibilities, and testing roles such as test lead, manual testers, and automation engineers. These topics are not present in Document A, which focuses on the technical development of a resume search application.

Most Divergent Sections (5 pairs)

Chunk pairs with the lowest semantic similarity between documents

Pair 1 14%

DOCUMENT A
Folder wise files: 1.MongoDB Account & Index Creation To create the mongoDB Account and indexes(BM25 & Vector) 2.Ingestion Documents: Phase by phase implementation for Ingestion Pipeline

DOCUMENT B
Data issues – Mitigation: Data validation checks • Environment instability – Mitigation: Dedicated support team 16. Roles and Responsibilities • Test Lead – Strategy, Planning, Reporting, Sign-off •
